

INAUGURAL-DISSERTATION

zur
Erlangung der Doktorwürde
der
Naturwissenschaftlich-Mathematischen Gesamtfakultät
der
Ruprecht-Karls-Universität
Heidelberg

vorgelegt von
Hui Shen
aus
Wuhan, Volksrepublik China
Tag der mündlichen Prüfung:

**Regulation der Transkription des *hspA* Gens
in *Stigmatella aurantiaca*
und
Analyse der Funktion des HspA Proteins**

Gutachter: Prof. Dr. Hans Ulrich Schairer
Prof. Dr. Richard Herrmann

Dissertation
submitted to the
Combined Faculties for the Natural Sciences and for Mathematics
of the Rupertus Carola University of
Heidelberg, Germany
for the degree of
Doctor of Natural Sciences

presented by
Hui Shen
born in Wuhan, People's republic of China
Heidelberg, 1999

**Transcriptional regulation of *hspA* gene
in *Stigmatella aurantiaca*
and
Function analysis of HspA protein**

Examiners: Prof. Dr. Hans Ulrich Schairer
Prof. Dr. Richard Herrmann

Acknowledgments

Sincere thanks to my supervisor Prof. Dr. Hans Ulrich Schairer for setting up the project and offering me the working place. I greatly appreciate his scientific supervision and practical advice throughout my work and his important comments on the manuscript.

I would like to thank the team of Prof. Dr. Johannes Buchner in Regensburg University, Germany, to offer me the opportunity to perform the chaperone assays with HspA protein in their lab. I specially thank Monika Ehrnsperger, Holger Graller and Christian Myr who greatly helped me during the work.

*Many thanks to Dr. Heinrich Lünsdorf in GBF institute, Germany, who carefully examined the ultrastructure of *S. aurantiaca* wild type and hspA deletion mutant cells and spores.*

My special thanks go to the team of Prof. Dr. Richard Herrmann for the sequence proof of some PCR products, and also go to the team of Dr. Rainer Frank for the sequence proof, oligo synthesis, and for the mass spectrometry measurement.

*Thanks are given to the whole team of Prof. Dr. Hans Ulrich Schairer, my colleagues, especially to Wulf Plaga and Irmela Stamm for sharing the electroporation protocol for *S. aurantiaca* before it was published, to Bianca Maxl for providing plasmid #9, to Barbara Silakowski for providing the sigma B mutant strain BS53, to Susanne Müller and Andreas Leclerque for proofreading this manuscript, for many fruitful discussion, and for organizing the lab.*

Also I would like to thank Giacomo Cavalli for introducing me the techniques in RNA manipulation, thank Inhua Chen to correct my English manuscript, thank the all people of ZMBH who helped me during my thesis work.

A thousand thanks to Jianbing Zhang, my husband, for his help throughout my whole life not only the whole time of this work, to my parents and my sisters for their support of my work and taking care of my daughter, and to my daughter Yaxin for excusing her mother who often has not enough time for her.
